## Evening Brief

Date: August 18<sup>th</sup>, 2021

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 18 fires for 123.45 acres / 10 acres Large Fire Growth

---

### Weather:

**... Showers, Thunderstorms and Gusty Winds across much of the Eastern Half of the Great Basin Through Thursday and Returning to the North this Weekend ...**

**... Sharply Cooler Next Few Days ...**

**... Breezy Winds and Low RH return to Central and Northern Nevada Saturday ...**

Cool, unsettled weather will continue across much of the region on Thursday.

A drier weather pattern returns to the Great Basin by Thursday night and Friday. However, another cold front will push into the northern third of the Great Basin by the weekend, with a reinforcing shot of cooler weather and scattered showers and thunderstorms with some wetting rains for parts of Idaho into Wyoming and northern Utah.

Winds will also pick up somewhat along the Sierra Front on Friday with more of a typical Zephyr wind with a greater increase in wind across Nevada and Utah on Saturday. The lowest relative humidity with the most critical fuels will remain over the western half of Nevada, where High Risk was added on Saturday. Winds diminish by Sunday with drier and warmer weather through the middle of next week.

---

### Fuels/Fire Potential:

**... Fuels and Fire Behavior Advisory in Effect for the Sierra Front above 5500 Feet ...**

Fire Danger will remain higher for western areas of the Great Basin due to recent hot temperatures and dry conditions. Fuels are driest across Western Nevada and far western Idaho, near or above the 90th percentile. Further north across Southern and Central Idaho ERCs are mainly in the 70th - 90th percentiles but will be dropping.

Rapid moistening of fuels is expected across the Eastern half of the Great Basin through the weekend with a change to sharply cooler and more moist conditions. Parts of Central, Southern and Western Idaho will only see modest moistening of fuels with much of the precipitation to the east. The only critically dry fuel areas by the end of the week will be across the Western half of the Great Basin and into parts of Southwest Idaho.

---

## Resources:

### Aviation within the Great Basin

- 0 VLAT, 1 LATs, 0 CL-415
- 22 SEATs, 0 FB, 7 AA, 1 ASM, 0 LP
- 8 Type 1 Helicopters / 8 Comm.
- 6 Type 2 Helicopters / 4 Comm.
- 17 Type 3 Helicopters / 12 Comm.

### Crews Committed within the Great Basin

- 7 IHCs / 1 Available IA / 1 R&R
- 7 Type 2IA / 0 Available / 2 R&R

## Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. of Origin Sage Grouse Habitat
